

Yes.

These proposals are in the best interests of our community, our volunteers and the station.

As an individual I would have to say that, while commercial interested parties will object to this and actually want Blast closed, it should be the responses from our community which should carry weight in this consultation.

I have spoken with many people who all support our proposals and hopefully they have responded to the consultation as traditionally responses to these type of consultations can be low. People say they will respond and then don't.

Furthermore, in the interests of democracy and community radio we trust that everybody's response will carry equal weight in determining support and opposition to the application by Blast106.

Btw - this is my 5th attempt at submitting this as the system keeps resetting itself. I've also had complaints from people wanting to participate in the consultation saying that the Spam Prevention widget is very poor quality and they have found it difficult to submit. Perhaps this might be looked at for future consultations.

As an individual I want to fully endorse the proposed changes. As someone who volunteers at Blast (as well as being a Director) I am fully aware of what my fellow volunteers want and also the community that we serve.
