

Question	Your response
Question 1: Do you agree we have identified the most relevant cost drivers to take account of in our charging approach?	Y
Question 2: Are there any other factors you consider we should take account of in our charging approach? Please explain why in your response.	Y – In order to achieve considerable growth in the Space sector the UK must become the most attractive country to grow new Space businesses, any charging scheme must still fit this ideal.
Question 3: What comments, if any, do you have on our charging options 1-4?	Y – The costs proposed will be a deterrent to new start-up and FDI businesses who will be looking at other countries NRA options before deciding where to grow their business. Any charging will put us at a disadvantage against those that do not charge.
Question 4: What other charging options, if any, do you believe we should consider?	Y – Consider not charging, the annual cost of ~£1M is a small sum to enable the UK to be the most attractive place to make Satellite filings. Alternatively, but not preferred, is not to charge SME's.
Question 5: Do you agree that our preferred charging option, option 3, is the best way to meet our objectives? If no, please state your preferred charging option and explain why.	Y – We agree it is the preferred option, if charging is politically mandatory. But we maintain it is also politically essential to make the UK become the most attractive place to grow new Space businesses - which this charging scheme does not do sending the opposite message.
Question 6: Do you have any comments on our proposed charging approach (as set out above)?	Y – Nil charges are essential to the UK achieving a status of the best country to grow new Space businesses.
Question 7: Do you have any comments on our proposals for implementing our charging approach?	Y - We suggest that Ofcom officials consult with BEIS, DIT and UKSA ministers and officials before implementation is decided, as this scheme opposes the aims of the proposed Space sector deal.
Question 8: Do you have any other comments on matters arising from this consultation?	Y – We propose that Ofcom ask for a briefing from the Space Growth Partnership on the ways industry and Government are expecting to enable the Space sector growth to 10% of global space revenues by 2030.
