<p>Question 1: (Section 3) Do you agree with our proposal for a single authorisation approach for new users to access the three shared access bands and that this will be coordinated by Ofcom and authorised through individual licensing on a per location, first come first served basis? Please give reasons supported by evidence for your views.</p>	<p>Confidential? –N</p> <p>Yes, we agree with this approach. We believe that a mixed bathing approach has historically been successful in making good use of spectrum for Ofcom managed fixed links bands.</p> <p>We also support the move by Ofcom to share the band with mixed technologies e.g. fixed links and new user localised mobile technologies.</p> <p>We believe that there are instances where spectrum has been auctioned on a nationwide basis to operators where spectrum is effectively sterilised for the use of many, and where the spectrum is not geographically required by operators on a nationwide basis</p> <p>We would encourage this approach for other bands e.g. the 1.4 GHz fixed links band which has recently been closed to new applications with a potential of it being auctioned on a nationwide basis. We believe this spectrum could be shared by mobile operators in urban areas where they require most spectrum and by fixed links in rural areas where operators have less demand for spectrum.</p>
<p>Question 2: (Section 3) Are there other potential uses in the three shared access bands that we have not identified?</p>	<p>We believe there is a potential option to provide narrow channels in the 3.8 – 4.2 band for fixed links over long distances for lower capacity applications.</p>
