

Your response

Question	Your response
<p>Question 1: Please provide feedback on the additions, amendments and clarifications we have made to the wording of the licence condition to implement our decisions on the scope of the licence condition in our October 2020 Statement, giving reasons for your response.</p>	<p>Confidential? – N</p> <p>EMF regulations must be proportionate to the risk. Not all amateurs run high power with beams, and many only use powers up to 100w.</p> <p>Change wording of licence regulation from ‘EMF level is below basic restrictions’ to read ‘EMF level does not exceed the basic restrictions’.</p>
<p>Question 2: Please provide feedback on the additions and clarifications to our ‘Guidance on EMF Compliance and Enforcement’, giving reasons for your response.</p>	<p>Confidential? – N</p> <p>The regulations need to recognise the condition only applies when transmissions are happening.</p> <p>Records keeping should be proportionate to the risk and only relate to calculated field exposure.</p> <p>Considering that guidance and training to meet the new regulations is required to be in place, an implementation period of 6 months is very short. I would suggest 12-18 months is more suited, accounting for the low risk level with most amateur stations.</p>
<p>Question 3: Please provide feedback on the trial version of our EMF calculator, giving reasons for your response.</p>	<p>Confidential? – N</p> <p>The EMF calculator is a tool with the results only as good as the input information, and any result deemed indicative and perhaps needing further investigation is the results are close to where people might be.</p>
