

## Your response

Question	Your response
<p><b>Question 1: Do you agree with our provisional view that the spectrum 733 to 736 MHz paired with 788 to 791 MHz should be made available to and authorised for use by the PSNI in Northern Ireland? If you disagree with our view and consider there is a higher value use, please provide details of this alternative use, particularly considering the issue of the risk of interference from SDL.</b></p>	<p><i>Is this response confidential? – N (delete as appropriate)</i></p> <p><i>Yes I agree with your provisional view that this spectrum should be made available to and authorised for use by the PSNI in Northern Ireland.</i></p> <p><i>We believe that providing mission critical operators in the UK (Emergency Services, Utility Companies, MOD) with access to spectrum is a critical part of providing them with a means to form essential independent communications networks. We believe this permits them the necessary means of developing highly-secure networks, and provide the tools to control the increasing requirements of defence against cyber-crimes which is critical for modern day national security.</i></p> <p><i>We believe that this will deliver greater national value to the UK than provision of this limited range spectrum for third-party commercial gain.</i></p>
<p><b>Question 2: Do you agree with our provisional view that the spectrum 876 to 880 MHz paired with 921 to 925 MHz should be made available to and authorised for use by the PSNI in Northern Ireland? If you disagree and consider there is a higher value use, please provide details of this alternative use, particularly considering the small market potential of this spectrum.</b></p>	<p><i>Is this response confidential? –N (delete as appropriate)</i></p> <p><i>Yes I agree with your provisional view that this spectrum should be made available to and authorised for use by the PSNI in Northern Ireland.</i></p> <p><i>We believe that providing mission critical operators in the UK (Emergency Services, Utility Companies, MOD) with access to spectrum is a critical part of providing them with a means to form essential independent communications networks.
