

Your response

Question 1: To assist us in categorising responses, please provide a description of your organisation, service or interest in protection of children online.

Is this a confidential response? (select as appropriate)

No

CEASE is a human rights charity whose mission is to expose and dismantle the cultural and commercial driving forces behind all forms of sexual exploitation in the UK.

We shine a light on what sexual exploitation is, where it occurs and how it contravenes our human rights. We campaign for new and better laws, advocate for policy change and hold the global sex industry to account. We also work to amplify the voices of survivors of sexual exploitation.

We specifically focus on the harms of pornography to our culture, individuals, and children. Pornography is driving hypersexualisation, sexual objectification and sexual entitlement. It also influences our sexual norms, attitudes and behaviours. Research confirms that it's having a particularly damaging impact on our children and young people.

According to the UK Government's 2015 statistics, <u>each month 1.4 million</u> children visit pornography sites from their desktop. A wide <u>range of studies</u> show that viewing pornography can profoundly impact children's psychological, social, emotional, neurological and sexual wellbeing, and impede their ability to form healthy, intimate relationships.

In 2021, <u>Ofsted</u> reported how easy access to pornography had set unhealthy expectations of sexual relationships among children. Adolescent porn consumption is associated with more permissive sexual attitudes, more sexual intercourse and more casual sex, along with stronger gender-stereotypical sexual beliefs, the tendency to support <u>"rape myths"</u> and the perception of <u>women as sex objects</u> (among both boys and girls).

CEASE firmly believe that children having unfettered access to hardcore pornography online is an immediate child protection issue that needs to be addressed by the UK government and we continue to campaign on this issue.

Question 2: Can you identify factors which might indicate that a service is likely to attract child users?

Is this a confidential response? (select as appropriate)

| |
| |
| |
| |
| Question 4: How can services ensure that children cannot access a service, or a part of |
| it? |
| Is this a confidential response? (select as appropriate) |
| No |

All regulated services, whether user-to-user services that host user-generated pornographic content, or services that host solely provider published pornography content, or search services that direct users to pornography sites, must implement robust, independent, certified age verification to prevent children from accessing pornographic content online. Regulated services must be satisfied beyond reasonable doubt that a user is 18 years or over.

As the regulator, Ofcom should specify an outcome-based standard for age checks to prevent sites applying weak, inaccurate, untested age estimation algorithms that will allow many underage users access to their content.

There should also be a consistent approach to enforcement of age verification both within the service itself and by the regulator, with one code of practice for all pornographic content. Age verification for pornography should be enforced rigorously wherever pornography is found on the internet and with due regard to the detrimental harm it causes to children who consume it, either accidentally or intentionally.

Question 4: How can services ensure that children cannot access a service, or a part of it?

This should not be difficult given that age verification is already used for online services every day – from purchasing age restricted goods online to online gambling, and thus this same regulation can and should be used for online pornography.

And of course, for sites, like Twitter, where pornography isn't their main focus, but was reported by the Children's Commissioner as the only platform outperforming adult sites in exposing children to pornography, it is an option to ban this content until they are ready to comply with age verification. Many social media sites already ban adult content, and technology exists which allows them to scan for it and remove it if it is uploaded

It is also worth noting that when it comes to determining the extent of the measures a site should apply to protect children, the size and capacity of a service should not be taken into account by the regulator. Instead, measures to enforce age verification should be applied in proportion to the risk of harm to children posed by a site, not in proportion to the site's financial capacity, nor the impact on its revenues of these basic protections for children. If sites cannot afford to implement protection for children from exposure to adult content, they should not be permitted to publish that material at all.

Furthermore, age verification should be implemented within 6 months of Royal Assent of the Online Safety Bill. Age verification to prevent children from accessing pornographic content was first introduced in the Digital Economy Act 2017. In 2019, the Government announced they would not implement the provisions. Since then, Barnardo's estimates that children have accessed pornographic content 54 million times. We cannot afford to delay this any longer.

As the Bill currently stands, there is no deadline for age verification to be implemented, and it's looking like it will not be implemented until 2026 at the very earliest.

Yet, there is no need for this extended wait for services to implement age verification. In France, Mindgeek implemented age verification with ten days' notice – and did so over Christmas and New Year. In Louisiana in the US, sites implemented age verification as soon as the legislation came into force in January this year. In the UK, sites have been prepared for age verification since the passage of the Digital Economy Act in 2017.

Question 5: What age assurance and age verification or related technologies are currently available to platforms to protect children from harmful content, and what is the impact and cost of using them?

Is this a confidential response? (select as appropriate)

No

While many big pornography sites have access to up-to-date technology solutions and revenue within the billions, they must not be permitted to implement their own version of age verification.

Pornography sites are commercially incentivised to resist or ignore age verification since their business model depends on maximising the number of visitors to the site. In fact, rather than championing age verification on its sites, the pornography giant Pornhub poured its energies into creating its own VPNs which will allow savvy underage users to bypass any controls put in by

Question 5: What age assurance and age verification or related technologies are currently available to platforms to protect children from harmful content, and what is the impact and cost of using them?

Internet Service Providers. Furthermore, the pornography industry "<u>aggressively markets its</u> <u>products to children</u> in a number of ways", including by "studying children's common keystroke errors in order to direct them to porn sites, and making pornography based on children's favourite cartoon characters". This is not an industry which can be trusted to prioritise the protection of children.

There are multiple independent age verification companies that can be used by services which host pornographic content to implement age verification. These are privacy preserving for the consumer and independent of pornography sites. The OSB must stipulate that any age verification provider is certified in a manner approved by Ofcom in order to ensure the highest possible standard of age verification.

| Question 6: Can you provide any evidence relating to the presence of content that is harmful to children on user-to-user and search services? |

Question 7: Can you provide any evidence relating to the impact on children from accessing content that is harmful to them?

Is this a confidential response? (select as appropriate)

No

Evidence of the harm pornography causes to children is indisputable.

Over the past 20 years, a vast, global pornography industry has sprung up online. However, unlike other global industries, online pornography has avoided virtually all regulation, scrutiny and accountability, which has allowed it to pursue profit without restraint. The online porn industry is neither naive nor neutral. Free from oversight, it has monetised videos of rape, abuse and other non-consensual sex acts. Always at the forefront of tech advancement, the porn industry has

Question 7: Can you provide any evidence relating to the impact on children from accessing content that is harmful to them?

designed its sites to ensure that vast numbers of visitors stay for as long as possible and return again and again - even if they are children.

Much of today's online porn <u>sexualises violence</u>, and <u>foregrounds men's aggressive sexual</u> <u>domination over women</u>. A <u>2015 meta-analysis</u> looking at the links between porn consumption and sexually-aggressive behaviour found that "exposure to non-violent and violent pornography results in increases in both attitudes supporting aggression and in actual aggression."

<u>Analysis</u> of 131,738 titles of videos recommended to first-time users on Pornhub, XVideos, and XHamster, found that:

- 1 in every 8 titles described sexual activities that constitutes sexual violence as defined by the World Health Organisation
- The word 'Teen' was the most frequently occurring word across the entire dataset
- Sexual activity between family members was the most frequent form of sexual violence
- The second most common category was that of physical aggression and sexual assault

Moreover, children are consuming this material at an unprecedented level. In 2015 the UK Government estimated that each month 1.4 million children were visiting pornography sites from their desktop. That figure is likely to have increased, particularly during the Covid-19 pandemic where adults and children were increasingly online.

Children's consumption of pornography has devastating impacts. A wide range of studies show that viewing pornography can profoundly impact children's psychological, social, emotional, neurological and sexual wellbeing, and impede their ability to form healthy, intimate relationships.

Yet, they continue to be allowed to access this material by both the porn industry and the UK government. In March 2018, <u>Childline</u> revealed that more than 2,000 children had sought counselling after accidentally stumbling onto hardcore pornography online; of those, one in ten children who received psychological help was 11 or under, and 63% were aged 12 to 15.

Research undertaken by the <u>Children's Commissioner's Office in January 2023</u> found that young people are frequently exposed to violent pornography, depicting coercive, degrading or pain-inducing sex acts; 79% had encountered violent pornography before the age of 18.

It also found that many children are first exposed to pornography at a very young age: 10% had seen it by age nine, 27% had seen it by age 11 and 50% of children who had seen pornography had seen it by age 13.

Respondents were more likely to state that girls expect or enjoy sex involving physical aggression, such as slapping or choking, than boys do. (Sexual aggression is generally portrayed as consensual (i.e. men dominating willing young women) and 'sensual' (i.e. presented as pleasurable).

47% of respondents stated that girls expect sex to involve physical aggression. A further 42% of respondents stated that girls enjoy physically aggressive sex acts.

This reinforces Ofsted 2021 findings which reported that easy access to pornography had set unhealthy expectations of sexual relationships among children.

Question 7: Can you provide any evidence relating to the impact on children from accessing content that is harmful to them?

Another <u>recent UK survey</u> found that 44% of boys aged between 11 and 16 who regularly viewed porn reported that it gave them ideas about the type of sex they wanted to try. The <u>UK's Big Talk Education Report</u> found that, for many boys, pornography is the main source of information about sex and sexual behaviour: "Questions like, 'Is it ok for me to cum over my girlfriend's face?' are not unusual, as is the apparent normalisation of anal sex."

In this context, it is unsurprising that children's consumption of online pornography has been associated with the <u>dramatic increase in child-on-child sexual abuse</u> over the past few years, which now constitutes around a third of all child sexual abuse. The <u>consequences</u> for both the perpetrator, who's often 'acting out' what he/she has seen in porn, and to the victims of this abuse, are often serious and far-reaching.

Yet, children's free and easy access to online pornography continues, with more and more children being damaged by its effects. Ofcom must ensure children cannot access pornographic content wherever it appears online.
