

Your response

Question	Your response
Question 1: Do you agree with our proposed changes to the ACI/blocking procedures?	Yes
Question 2: Do you have any comments on the adoption of the new ETSI mask characteristic and on the potential use of the non-critical spectrum mask?	No
Question 3: Do you agree with our proposed changes on DAB+ audio encoding?	There should be no limits on implementation of DAB+.
Question 4: Do you agree with our other proposed revisions to the Digital Radio Technical Code outlined in Section 6 of this document? Do you have any views on alternative models for dealing with the administration of Sid and TII codes?	Reuse of SID and TII codes would work and similar techniques have been used in areas such as Business Radio with other technical codes such as CTCSS. However there should be a stay-apart distance of around 200-250km between SID reuse.
Question 5: Do you agree with our other proposed revisions to the Technical Policy Guidance for DAB Multiplex Licensees document outlined in Section 7 of this document?	No. Removal of UEP levels 1 and 2 will remove the flexibility that can be afforded to low demand multiplexes in rural areas.
