

Question	Your response
Question 1: Do you agree with our proposed changes to the ACI/blocking procedures?	N/a
Question 2: Do you have any comments on the adoption of the new ETSI mask characteristic and on the potential use of the non-critical spectrum mask?	N/a
Question 3: Do you agree with our proposed changes on DAB+ audio encoding?	Yes
Question 4: Do you agree with our other proposed revisions to the Digital Radio Technical Code outlined in Section 6 of this document? Do you have any views on alternative models for dealing with the administration of Sid and TII codes?	<p>✂ Regarding the allocation of SID/PI codes for DAB and FM, Radioplayer would advise against undermining the current model of unique codes being issued. We believe that both existing receivers and the new 'hybrid' radio interfaces for cars could be adversely affected by a system which allowed for code duplication.</p> <p>Regarding potential alternative models for administering code allocations, Radioplayer has no particular view on whether Ofcom should continue to lead on this or not.</p> <p>But if it is decided that responsibility should pass to another organisation, we would strongly recommend that the new organisation is one which is run on a non-profit basis, has the backing of all the UK's broadcasters, and is not allied with any of the major transmission providers.</p> <p>✂</p>
Question 5: Do you agree with our other proposed revisions to the Technical Policy Guidance for DAB Multiplex Licensees document outlined in Section 7 of this document?	N/a
