

Question	Your response
<p>Question 1: Do you agree with our proposed changes to the ACI/blocking procedures?</p>	<p>I like practical approach of the testing.</p>
<p>Question 2: Do you have any comments on the adoption of the new ETSI mask characteristic and on the potential use of the non-critical spectrum mask?</p>	<p>I'm sure the non-critical mask will give adequate ACI protection for powers less than 100watts ERP. The dynamic range of measuring equipment would probably be unable to confirm unwanted products with the relaxed mask filtering.</p>
<p>Question 3: Do you agree with our proposed changes on DAB+ audio encoding?</p>	<p>Yes DAB+ should be the primary coding for SSDAB but to cater for older DAB radios, a parallel MP2 service should be allowed for a restricted period.</p>
<p>Question 4: Do you agree with our other proposed revisions to the Digital Radio Technical Code outlined in Section 6 of this document? Do you have any views on alternative models for dealing with the administration of Sid and TII codes?</p>	<p>If it eases expansion of the local service, relaxation of the TII codes rules would be an advantage.</p>
<p>Question 5: Do you agree with our other proposed revisions to the Technical Policy Guidance for DAB Multiplex Licensees document outlined in Section 7 of this document?</p>	<p>Please excuse SSDAB until further examination is done.</p>
