

## Your response

Question	Your response
<p><b>Question 1: Do you agree with our proposals to add the 6425-7070 MHz band to the Shared Access framework?</b></p>	<p>No. It is unacceptable to roll out higher frequencies when existing Electrosmog is already making people ill. Where are the independent Health and Environmental Impact Assessments? Where are the comprehensive studies showing that this is safe??</p>
<p><b>Question 2: Do you have any comments on potential uses for this licence?</b></p>	<p>Yes We are already being bombarded with Electro smog. We don't need more and in particular we don't need more high frequencies, which are particularly harmful to Health and Wildlife. The higher frequencies are being rolled out without independent Strategic Health or Environmental Impact Assessments, i.e. without Due Diligence. And what about the already Electro-sensitive??</p> <p>For your information, tens of thousands of scientific papers (linked herein) have cited apparent connections to the role of EMFs in a multitude of adverse health effects, including depression, infertility, cancer, damage to DNA/gene expression, oxidative stress, pregnancy complications, melatonin production, neurological disorders, immune dysfunction, Alzheimers/dementia, leukaemia, and many, many more:</p> <p>Over 1,600 scientific papers can be found here: <a href="https://www.powerwatch.org.uk/science/studies.asp">https://www.powerwatch.org.uk/science/studies.asp</a></p> <p>Another 4000+ studies can be found here: <a href="http://www.bioinitiative.org">http://www.bioinitiative.org</a></p> <p>And another 23,840 studies also linked here: <a href="http://www.EMF-portal.org">www.EMF-portal.org</a></p>

**Question 3: Do you have any comments on our proposed licence conditions, licence fee or minimum separation distance?**

Do these conditions take into account the fact that people have the right not to be exposed to pulsed, modulated, high-frequency radiation? How will this affect neighbours who do NOT want to be exposed?

**Question 4: Do you have any comments on our technical analysis?**

I would like to see a Health and Environmental analysis, i.e. joined-up thinking. There is ample evidence that already existing Electrosmog is harming Humans and killing the bees. Bees are particularly sensitive to high-frequency radiation. It should not be allowed, ever.
