

Question	Your response
Do you have any comments on our proposal to apply Code powers to the applicant?	<p>Can the applicant confirm whether it will open its network to other operators and on what basis:</p> <ol style="list-style-type: none">1. Will the applicant 'sell' its telecoms services on a wholesale basis and so other operators can only be a 'reseller' of the applicant's services to its developments;2. If other operators can use the applicant's network in their own right and provide their own fibre/services direct to the end customer, will the applicant stipulate a period of time by which the other operators will have to wait before they can provide service – e.g. after a 2 year liability period from applicant reinstatement or when any such development is handed over to local authority for adoption?3. Does the applicant actively encourage other operators to provide services direct to end users on the applicant's developments so as to give choice of services to such end users?
