

Question

Do you have any comments on our proposal to apply Code powers to the applicant?

Your response

Will the applicant allow other operators to install their own fibre in the network and on the applicant's developments at the same time that the applicant installs its own fibre in order to provide services - purely to offer choice of services to the end users?

Assuming that the answer to the above question is 'yes', how will the operators know when the applicant is installing its own fibres in the network on the relevant developments?
