

Response to: Proposal to apply Code powers to the Net Support UK Limited

Respondent: Name withheld

Dear Team

Thank you for allowing comment.
This seemingly has been a shortfall.

There has not been any public consultation regarding the ensuing roll-out of 5G.
Neither have there been any studies about the impact that 5G will have on public health, prior to the insidious start of the roll-out of 5G.

Let me make it clear.
This is not acceptable.
I wish business to enjoy the benefits of success, but not at the expense of public wellbeing.
You have not considered this.

If it is the case, that you are beholden to Government, then I implore that you discuss this with them, with the greatest urgency.
5G is not safe. There are now thousands of studies available, supporting this statement.

The obliteration of our treasured landscape with hideous mast installations, alongside the unforeseeable human cost of such, is unacceptable.

A flagrant alteration to planning laws regarding the placement of mast installations on private land and in public areas in favour of industrial providers, is also, not acceptable.

Insurers will not cover any eventuality involving 5G.
Does this not raise questions?

I implore you, the pursuit of any 5G dreamworld requires urgent enquiry.
5G is surely a failed fantasy, offering little reality.
The reality is, we're on borrowed time upon this earth.
You can nourish it or you can destroy it.
There's no compromise and no time.
Quit now.

Think of your grandchildren.

Microsoft CEO says 5G is not safe
