

Full name: Gary Evans  
Organisation (Optional): Mersey Tunnels

**Your response**

Question 1: Do you have any comments on the drafting of the Proposed Regulations?:

The proposed use of the 5.8Ghz frequency band for use by extending WiFi services does not appear to address the current use of this frequency by road tolling systems - using DSRC (Dedicated Short Range Communication) technology in the same frequency band. We are therefore concerned that this will be introduced without understanding the wider impacts on other technology in use and create reliability issues for tolling technologies across the UK. We would ask that a full understanding of the impacts are studied and understood before this proposed regulation progresses.

Question 2: Do you have any comments on the proposed technical parameters?:

See above.
