

**Title:**

Dr

**Forename:**

Jenifer

**Surname:**

Robb

**Representing:**

Self

**What do you want Ofcom to keep confidential?**

Keep nothing confidential

**Question 1: Are there any reasonable grounds why Ofcom should not grant the request to vary the five Wireless Telegraphy Third Generation Mobile Licences by increasing the permitted maximum in-band EIRP to 68dBm as soon as practicable? If so, please explain your reasoning for this:**

There is concern and controversy about the current radiation level and the possible effect on health, both short term and long term. It therefore seems cavalier to even consider increasing this level. There obviously has to be a balance between technological advances in communication systems and protection of public health. The responsible action would be to oppose any increase until it is clearer what affect it would have on human health. If current levels are detrimental in any way to human health then it seems likely that higher levels will be even more so.

**Question 2: Are there any reasonable grounds why Ofcom should not also apply the increased permitted maximum in-band EIRP to future 2 GHz MSS/CGC licences? If so, please explain your reasoning for this:**

The same reasoning as above would apply.
