Self

What do you want Ofcom to keep confidential?

Keep nothing confidential

Question 1: Are there any reasonable grounds why Ofcom should not grant the request to vary the five Wireless Telegraphy Third Generation Mobile Licences by increasing the permitted maximum in-band EIRP to 68dBm as soon as practicable? If so, please explain your reasoning for this:

The energy radiated from these masts is already at a level that could be injurious to health and by increasing the maximum in-band EIRP by such a large amount there is a corresponding exponential risk to health, therefore on the grounds of public safety this increase should be disallowed.

Question 2: Are there any reasonable grounds why Ofcom should not also apply the increased permitted maximum in-band EIRP to future 2 GHz MSS/CGC licences? If so, please explain your reasoning for this:

The energy radiated from existing masts is already at a level that could be injurious to health and by increasing the maximum in-band EIRP by such a large amount and permitting additional licences there would be a corresponding exponential risk to health, therefore on the grounds of public safety this further increase and additional licences should be disallowed.
