Self

**What do you want Ofcom to keep confidential?**

Keep nothing confidential

**Additional comments:**

Ofcom

I am horrified by this new proposal a mast was erected approximately 100 metres from our house in order to serve not us but a neighbouring housing estate as we have a full signal. They have now applied to make the mast 2 metres taller and add another 3 antennas giving off 3G signal, which will make a total of 6 antennas. These are NOT for us as we have a full signal and now we are going to have 4 times the radiation previously sent out.

We do not only have a large unsightly mast but also the transmission of these signals will as I and my neighbours are convinced ruin our health and nobody cares and no action will be taken until it is too late. Other countries do not allow this dosage of radiation so why should the UK

**Question 1: Are there any reasonable grounds why Ofcom should not grant the request to vary the five Wireless Telegraphy Third Generation Mobile Licences by increasing the permitted maximum in-band EIRP to 68dBm as soon as practicable? If so, please explain your reasoning for this:**

There is no reason to believe that the emission from these masts are not dangerous to our health and I do not think that we should allow the radiation to increase without looking further into this.

Other countries are being far more sensible in the siting of the masts than the UK is. I do not often use a mobile phone and do not see why my and other people's health should be damaged by companies just trying to make a large profit.

**Question 2: Are there any reasonable grounds why Ofcom should not also apply the increased permitted maximum in-band EIRP to future 2 GHz MSS/CGC licences? If so, please explain your reasoning for this:**

The reason is that we do not currently know the health risks from these masts. The government and other people who stand to make a lot of money out of these masts are just turning a blind eye.

I do not think we should be increasing the power of these masts until it can be proven that the current ones are safe. Would you live under an electricity pylon and how long did it take the government to admit that these were dangerous?
