Mrs

Forename:

Ruth

Surname:

Adam

Representing:

Self

What do you want Ofcom to keep confidential?

Keep nothing confidential

Question 1: Are there any reasonable grounds why Ofcom should not grant the request to vary the five Wireless Telegraphy Third Generation Mobile Licences by increasing the permitted maximum in-band EIRP to 68dBm as soon as practicable? If so, please explain your reasoning for this:

Independent research shows us that electromagnetic fields associated with mobile telecommunications adversely affect human health in both the short and long term.

Whilst this is still denied by Government and Phone Operators, the very possibility of damage to humans should prevent the proposed massive increase in signal strength. Surely this is common sense?

The increase would be quadrupling the dose of EM radiation thus increasing the proportion of the population whose health will be adversely affected.

If this goes ahead, it will be interesting to see, in say 30 years time, the positive correlation between the increased dose and the increased frequency of illnesses associated with exposure to EM radiation.

Question 2: Are there any reasonable grounds why Ofcom should not also apply the increased permitted maximum in-band EIRP to future 2 GHz MSS/CGC licences? If so, please explain your reasoning for this:
