**What do you want Ofcom to keep confidential?**

Keep name confidential

**Question 1: Are there any reasonable grounds why Ofcom should not grant the request to vary the five Wireless Telegraphy Third Generation Mobile Licences by increasing the permitted maximum in-band EIRP to 68dBm as soon as practicable? If so, please explain your reasoning for this:**

Many of these masts are in residential areas and near schools, in the case of which I have particular concern. My son attends a primary school near a mast, which is bad enough as the main beam is across the playground, to increase microwave based power so near to where children are is totally unacceptable. Surely it is more than reasonable grounds to keep output to a minimum in residential areas, especially where vulnerable groups are such as children, even if this means the service provider finding alternate measures at excess cost.

**Question 2: Are there any reasonable grounds why Ofcom should not also apply the increased permitted maximum in-band EIRP to future 2 GHz MSS/CGC licences? If so, please explain your reasoning for this:**

Again my reasons are health related as above, and believe that masts in residential built up areas should be kept to a minimum output.
