

**Organisation (if applicable):**

Parish Council

**What do you want Ofcom to keep confidential?**

Keep name confidential

**Question 1: Are there any reasonable grounds why Ofcom should not grant the request to vary the five Wireless Telegraphy Third Generation Mobile Licences by increasing the permitted maximum in-band EIRP to 68dBm as soon as practicable? If so, please explain your reasoning for this:**

Yes there has not been enough research carried out as to the effects on health from these types of masts

**Question 2: Are there any reasonable grounds why Ofcom should not also apply the increased permitted maximum in-band EIRP to future 2 GHz MSS/CGC licences? If so, please explain your reasoning for this:**

As above. It is well known that other countries have already taken action to reduce these levels and some will not allow masts with certain restricted distances of any property. There has not been enough research undertaken more so with these types of installations and they should not be allowed merely to fall in line with previous inadequate research which at best is inconclusive and leaves serious doubts about health issues to the general public.
