What do you want Ofcom to keep confidential?

Keep name confidential

Additional comments:

We should be reducing all damaging microwave radiation power signals, like other country's are doing NOT increasing them. Take a look at other's precautionary approx and learn from their example!

Question 1: Are there any reasonable grounds why Ofcom should not grant the request to vary the five Wireless Telegraphy Third Generation Mobile Licences by increasing the permitted maximum in-band EIRP to 68dBm as soon as practicable? If so, please explain your reasoning for this:

Yes. They should take the precautionary approach and keep transitions to a minimum. Take note of what other countries are doing. No studies have proved that these are safe.

Question 2: Are there any reasonable grounds why Ofcom should not also apply the increased permitted maximum in-band EIRP to future 2 GHz MSS/CGC licences? If so, please explain your reasoning for this:

Yes. They should take the precautionary approach and keep transitions to a minimum. Take note of what other countries are doing. No studies have proved that these are safe.
