

Title:

Mr

Forename:

Graham

Surname:

Cable

Representing:

Self

Organisation (if applicable):

What do you want Ofcom to keep confidential?:

Keep nothing confidential

If you want part of your response kept confidential, which parts?:

Ofcom may publish a response summary:

Yes

I confirm that I have read the declaration:

Yes

Ofcom should only publish this response after the consultation has ended:

You may publish my response on receipt

Question 1.1: What are the implications of market change for mobile and wireless services?:

No idea

Question 1.2: How are citizens and consumers affected by developments in the mobile sector?:

My bill increases

Question 1.3: What are the purposes of mobile regulation, and where should its focus lie?:

I think there is no regulation.

Mobile operators have been allowed to print money for 5 - 10 years

Question 1.4: What is the scope for deregulation, competition and innovation in the mobile sector?:

Ask the obvious questions, rather than rely upon the operators to tell you what to think

Question 3.1: What do you think are the features of a well-functioning mobile market? What evidence do you see that those features are present in the UK market?:

low cost & different tariffs.

No sign of this in the UK.

The marketing bundles may vary (and hence make comparisons very difficult), but the underlying costs look almost identical

Question 3.2: What measures are most appropriate to assess whether the mobile sector is performing well for citizens and consumers?:

Strip out the marketing differences.

I have an iPhone from O2. The iPhone tariff is NOT the standard O2 tariff. Am I better/worse off? No idea

Question 3.3: How will market dynamics change as a result of trends such as availability of new spectrum, mobile broadband and new ways of delivering voice services?:

Increase in operator profits

Question 4.1: What is your experience, as an individual consumer or an organisation that uses mobile services?:

No comment

Question 4.2: How should regulators and policy-makers respond to signs of rising consumer concern? :

Ask the obvious questions

Question 4.3: What are the important factors to consider in striking a balance between protecting mobile consumers and enabling markets to work flexibly? Have we got this balance right in today's mobile market?:

There is no conflict.

No. You allow collusion

Question 5.1: How does the use of mobile services affect our participation as citizens in society?:

In practice none.

But without a mobile one is perceived as being dias-advantaged

Question 5.2: What factors should we take into account in thinking about access and inclusion issues in mobile markets?:

I am now bored with this consultation.

My Issue with mobile phone charges is simple.

Every 12 month upon renewal,I am offered a new phone (or last year an iPod). So while still maintaining their profitability, the mobile operators are able to offer a kick back of £100 - £200 EACH year. Something is wrong here.

A) this suggests the actual operating price could be lower (by £100 - £200 EACH year)

B) it encourages people to change phones every year. Why?? Given the current state of phone development yearly enhancements are fairly minimal, AND, it is to say the least, not eco friendly

Question 5.3: What factors should we take into account in thinking about new services, and how those services may affect issues like protection of children, privacy and security?:

Question 5.4: Have you been affected by issues about coverage or 'not spots'? How has it affected you?:

Question 7.1: What do you see as the most influential trends and features of mobile and wireless markets in future?:

Question 7.2: What new policy and regulatory challenges could the trends identified in this section bring? Which policy and regulatory challenges could they address?:

Question 8.1: Should Ofcom do more to promote competition in mobile and wireless markets?:

Question 8.2: Ofcom's strategy in telecommunications is to promote competition at the deepest level of infrastructure that is effective and sustainable. How might this strategy be applied, given future developments in the mobile sector? Under what circumstances, if ever, would it make sense to consider access regulation for mobile platforms?:

Question 8.3: What role can competition play in ensuring that future development of the mobile internet provides an open and flexible environment for a wide range of services? Should Ofcom explore open access requirements to ensure opportunities for innovation? What role might 'net neutrality' play in the mobile sector?:

Question 8.4: What role might competition play in addressing questions about transparency of prices, services and contractual conditions offered to consumers of mobile and wireless services? What role should regulation play in addressing these questions?:

Question 8.5: What is the best way to promote content standards and ensure privacy protection for increasingly complex content and transaction services? How will privacy issues fare in a world where services are more personal and more complex?:

Question 8.6: Will the mobile termination rate regime need to evolve or change more fundamentally? What is the best approach to adopt?:

Question 8.7: If competition does not reduce international roaming charges sufficiently, how should regulators respond, if at all?:

Question 8.8: How might universal service and universal access need to adapt in a world where we increasingly rely on mobile services? What role might mobile play in universal access delivery in future?:

Question 8.9: Can markets and commercial agreements address issues such as 'not spots' and emergency access? If not, what role might be played by a regulator to address these issues?:

Question 8.10: How might access for particular groups (such as the elderly and disabled users) need to evolve in future? What role can competition play in addressing these questions?:

Question 8.11: Do you have any comments regarding our proposed way forward and the objectives of the next phase of this Assessment?:

Additional comments:

I am now bored with this consultation. It is so structured, you clearly only want answers to the questions you want addressed. NOT the issues I want resolved

My Issue with mobile phone charges is simple.

Every 12 month upon renewal,I am offered a new phone (or last year an iPod). So while still maintaining their profitability, the mobile operators are able to offer a kick back of £100 - £200 EACH year. Something is wrong here.
