

Question 1: How should Ofcom manage the process of taking advice from users, regulators and government on efficient apportionment of AIP fees in the maritime and aeronautical sectors? Are any new institutional arrangements needed?:

Question 2: If you consider that our proposals for pricing ground station users for any spectrum would be likely to have a detrimental impact on safety, please let us know. In order for us to understand your assessment fully, it would be helpful if you could outline the mechanisms whereby this might happen.?:

Question 3: Do you have any evidence which indicates that AIP charged to ground stations could have a material detrimental impact on UK competitiveness?:

Question 4: Taking into account the information available in this document, including that set out in Annex 5, our initial views on VHF radiocommunications licence fees and on the reference rates for bands in other uses, and any information you have about the organisations to whom we are proposing to charge fees, please provide any evidence that you think is relevant to us in considering the financial impact of the fees we intend to propose for VHF radiocommunications, or for other uses:

Question 5: Do you agree that there is little to be gained, in terms of economic efficiency, from charging AIP to WT Act licences for aircraft:

Question 6: Do you consider that we should discount fees for any particular user or type of user? Specifically, do you consider that there should be a discount for charities whose object is the safety of human life in an emergency:

It is deplorable that Ofcom is considering on whether to require charities whose main purpose is the cessation of suffering and saving of lives to pay for spectrum which is essential to their operational effectiveness. It is all the more galling and incomprehensible given that the Government has already committed to ensuring that spectrum in use by such organisations is free in a document referred to by this consultation:

"Emergency and public safety services depend on spectrum for effective and efficient communications. The Government will not compromise their operational effectiveness."

<http://www.spectrumbauidit.org.uk/pdf/Governmentresponse.pdf> (Govt Response, sect 9)

It would appear that Ofcom have conveniently glossed over this particular statement.

In specific response to the question, yes, there should be a significant discount to charities whose objectives are or include as a major object the safety of human life in an emergency. I would go so far as to suggest that at most, a nominal fee should be raised against the allocation and only as an indicator that spectrum is a finite and scarce resource. At no time should the fees charged to these organisations reflect commercial fees, as such a tariff structure would be prohibitively expensive to an organisation whose main source of income is public donations.

Question 7: Do you agree that Ofcom should apply AIP to ground stations? use of maritime and aeronautical VHF radiocommunications channels, to help manage growing congestion in current use and to ensure that the cost of denying access to this spectrum by potential alternative applications is faced by current users?:

Question 8: Do you agree with our initial view that it would be appropriate to apply a pricing system similar to that already existing for Business Radio licences to maritime and aeronautical VHF communications? If not, what are your reasons for proposing that we should develop a fee structure for maritime and aeronautical VHF channels which is distinct from that already established for Business Radio?:

Question 9: Are there any short term reasons specific to the sector(s) why it would be inappropriate to apply fees from April 2009?:

Question 10: Ofcom would welcome stakeholders? views on the factors which should be taken into account when apportioning fees between individual users of radars and racons:

Question 11: Do you agree with our initial view that a reference rate of £126k per 1 MHz of national spectrum for L band and S band radar spectrum would achieve an appropriate balance between providing incentives to ensure efficient use of spectrum while guarding against the risks of regulatory failure in setting the reference rate too high? If you consider a different rate would be more appropriate, please provide any evidence that you think we should take into account.:

Question 12: Do you agree with our initial view that a reference rate of £25k per single MHz of national spectrum would be appropriate for deriving fees for licences to use X band radar?:

Question 13: Do you agree that, generally, spectrum used by aeronautical radionavigation aids is currently uncongested? Do you believe that this may change during the next few years and, if so, approximately when?:

Question 14: Do you agree with the basis on which Ofcom has arrived at its initial view on reference rates for aeronautical radionavigation aids?:

Comments:

Beyond the use of spectrum by voluntary and charitable emergency service organisations, I have no further specific comment other than generic support for the goals that Ofcom is trying to achieve in this situation. The commercial aspects seem to be fair in this consultation.
