

**Name and title under which you would like this response to appear:**

Mr I McDonald

**Representing:**

Self

**Question 1: When do you consider it would be timely and efficient for next generation access investment to take place in the UK?:**

ASAP. While cost will no doubt fall in the long term we need to keep out internet infrastructure up to date as we have fall way behind our european counterparts in terms of speed.

**Question 2: Do you agree with the principles outlined for regulating next generation access?:**

Yes

**Question 3: How should Ofcom reflect risk in regulated access terms?:**

**Question 4: Do you agree with the need for both passive and active access remedies to promote competition?:**

I, along with many others, feel that the copper network that is currently in place have become out dated and needs to be replaced. Rolling out fibre to EVERY UK home would ensure our network was up to date for years to come.

**Question 5: Do you consider there to be a role of direct regulatory or public policy intervention to create artificial incentives for earlier investment in next generation access?:**

Yes. 100%
