What are your comments on these proposals?

I am horrified that you are considering stopping broadcasts on FM-VHF. The present DAB, even when using 192 MB/s, is much inferior to the sound quality on FM-VHF. If the BBC broadcast Radio 3 using 256 MB/s then the quality would probably equal the quality of FM-VHF.

Surely quality **MUST** come before quantity and financial considerations, so I suggest that FM-VHF broadcasting by the BBC must continue, at least until there is enough spectrum for the BBC to broadcast DAB using 256 MB/s for radio 3.
