

This is my response to this consultation.

1. I support deregulation and the removal of the need for licences in the Citizen's Band service.
2. I support the use of low power micro-transmitters in Band 2 as long as the output power limit is set at such a level that interference to others is negligible. 50mW seems correct.
3. I am against any changes to the allocations at 2.4, 10 and 24GHz that would adversely impact the technical research currently being undertaken by radio amateurs. Their work on long distance microwave propagation using cloud and rain scatter, satellite and moonbounce is of great value to science and must not be compromised.
