

Nick Vernon G8NAV

Question 1: Do stakeholders agree with the proposals for the award of licences in the 10 GHz, 28 GHz and 32 GHz bands in 2007?: Not in the 10Ghz band, There is no mention of the current use within the 10Ghz band of the Amateur Service, in your executive summary! The part of the 10Ghz band you propose to use is the weak signal section from space satellites, their signals will be obliterated.

Question 2: Do stakeholders agree with the proposal to include in the award of the 32 GHz band that portion of the band that has been open since 2003 for point-to-point applications?: I have no preference.

Question 3: Do stakeholders agree with the proposals to defer the release of the 40 GHz band and review the position in two years' time?: Yes

Question 4: Do stakeholders have any other comments on the contents of this document?: I urge you to consider at least minimal standards of technical compliance to limit interference, and to rethink 55dBw as an upper limit, 36dBw is quite sufficient. If it doesn't work at that level they are really not trying.
