

Alister Watt

Question 1: Do stakeholders agree with the proposals for the award of licences in the 10 GHz, 28 GHz and 32 GHz bands in 2007?:

Yes, but not on the Amateur radio allocation. Presumably other 10GHz activity will not interfere with 'BSkyB satellite dishes'?

Question 2: Do stakeholders agree with the proposal to include in the award of the 32 GHz band that portion of the band that has been open since 2003 for point-to-point applications?:

Providing that any existing use carries on.

Question 3: Do stakeholders agree with the proposals to defer the release of the 40 GHz band and review the position in two years' time?:

Yes

Question 4: Do stakeholders have any other comments on the contents of this document?:

There should be a segment of licence-free spectrum available as I am sure wireless internet access will require large portions of spectrum around 40GHz. If access is only going to cost maybe £9.99 per month then the operator will not wish to pay for the spectrum as the benefit to the country of a super-fast digital network will outweigh giving the exchequer vast sums of money.
