Question 1:

Do you have any comments or representations on the Proposed MTA Regulations and/or the Proposed STA Regulations, including the regulatory impact assessment, set out in this document?

There should be a swim lane of 10% of the network for academic and community use. ESPECIALLY since this is short range and BT/Openreach have done little with their broadband subsidy. 25% cap on *net* spectrum ownership seems better for competition and enough incentive for investment. Three are spamming me asking for 30% cap without any supporting evidence and I think this is dishonest.
