Self

Question 1:

Do you have any comments or representations on the Proposed MTA Regulations and/or the Proposed STA Regulations, including the regulatory impact assessment, set out in this document?

I believe the position of Ofcom is to protect the consumer and regulate the Spectrum where companies are not allowed larger stakes without using it effectively for improving services for end users - this results in squeezing the competition and reducing the service quality for end users!

Ofcom must impose a cap on Spectrum share own by individual companies to allow fair competition and improved services for end users!
